

**Benevet Social Purpose Corporation**  
**2020 Social Purpose Report**

Report Completed: April 21, 2021

Benevet Social Purpose Corporation is dedicated to making animal health care more accessible, convenient, and affordable, by providing telehealth software as a service for animal owners and veterinarians. Veterinarians will be able to more easily connect with animal owners to deliver care and with other veterinarians, such as specialists, via the Benevet platform. Animal owners will be able to more easily monitor and care for their animals' health.

Benevet views its platform as a comprehensive veterinary care platform, with the goal of transforming pet health care from something that is done periodically or on an as-needed basis to something that is done nearly continuously. Pet owners can meet with or message veterinarians with greater frequency and can participate more substantially in contributing to a pet's medical records by uploading photos, videos, and notes at any time.

Benevet's primary short-term goal is to complete our first product release in both website and app (Android and iOS) versions, as our first step toward improving animal health care. Longer-term, we plan to add partners and features to our product to improve communication and provide additional health data that can be used by both owners and veterinarians to further improve animal health.

Our primary efforts in 2020 have included progress on the product, fundraising, working directly with veterinarians (including our company's own Advisory Board members) and beginning a promotional effort to raise awareness of ways to improve animal health.
